Maximizing the Value of Packaged Software

# SPEED$^{sm}$

SPEED$^{sm}$ Solutions

**SPEED**
n
1. A comprehensive strategy specifically designed for companies to extract the maximum value from their packaged software and relational database environments.

# DBXperts

performance matters

## THE NEED FOR SPEED

Once we've seen an increase in performance in *anything* once, the "bar" has been raised and expectations have been set. It's in our blood, we have a fascination with speed.

So its natural that we have **high expectations for the performance** of our packaged software solutions. Time is the most precious resource available in business today and it can cripple your company or excel it to great heights. Improving the performance of your ERP,CRM and Supply Chain applications means faster access to information, quicker decisions and better value for your workforce and customers.

A performance management solution must render a business more effective — improving user experiences, speeding delivery time, increasing customer retention, lowering ownership costs and positively impacting the bottom line.

## GENERIC APPLICATIONS vs. BUILT-IN PERFORMANCE

Packaged Software vendors build their solutions to support the widest range of companies, using the most standardized business processes and the most common technologies. They provide the ability to customize business processes and even customize the data that is being captured. They also recognize the need to allow each client to execute business in their own manner. Designing package software to be customer, hardware and database independent while still allowing flexibility makes it nearly impossible to achieve acceptable performance everywhere.

Each customer environment is different, has site specific customizations, varying usage patterns and unique data volumes. These non-conforming variations from the generic business model make Packaged Software performance simply unpredictable.

**If your Business Processing Model and Data Capture is unique SO TOO is your Performance solution.**

DBXperts is a performance management solutions company. We've been delivering performance management solutions to Packaged Software and relational database customers since 1995. The original version of SPEED$^{SM}$ was created in 1998 to enable standardized performance enhancement solutions for database environments. In 2000, SPEED$^{SM}$ was expanded to incorporate specific procedures and capabilities for packaged software platforms. SPEED$^{SM}$ leverages proprietary technology, process and intelligence in capturing, analyzing, assessing and enhancing database and packaged software performance.

## The answer to poor performance is SPEED

DBXperts

# SPEED Counts!

## Use SPEED and your department can provide

- Graphical display of performance metrics
- Immediate Solutions from our archive
- Proof of performance investment
- Continuous performance telemetry
- Repository of performance activity by:
  - SIGNON
  - PROCESS
  - DATABASE

## Empower Your Team with

- End-to-end methodology
- Performance change archive
- Environmental heart-beats
- Impact analysis tools

## Low Infrastructure Cost

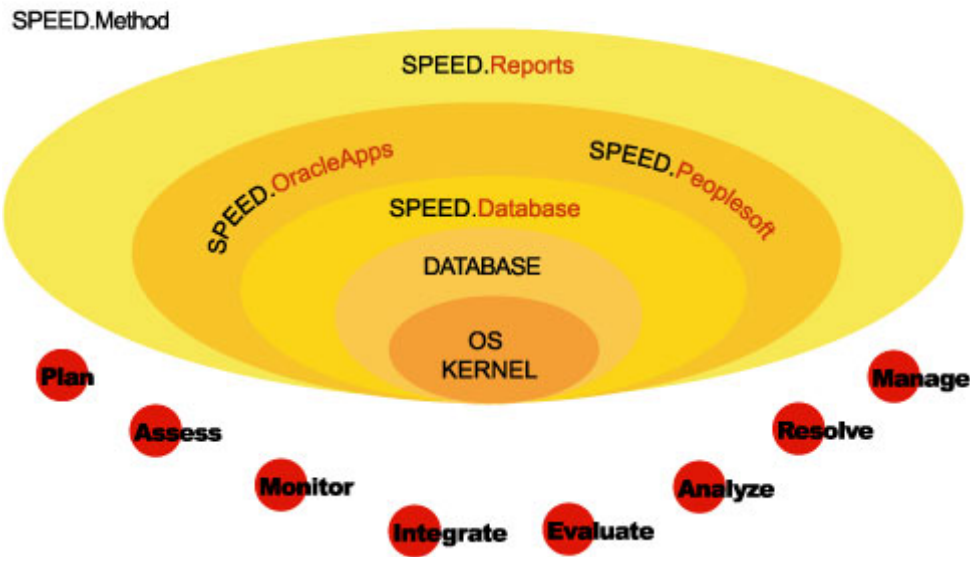
- Remote & customizable acquisition of performance telemetry
- Custom performance solutions based on customer development requirements

## The DBXperts Difference

DBXperts ensures your organization maximizes the value its packaged software and optimizes its ROI though our high performance and scalable performance solutions. Solutions based on:

- A time-tested & proven performance practice.
- Best practice methodology.
- Sophisticated telemetry gathering technologies.
- High performance tuning products.

## The DBXperts Solution



SPEED.Database focuses on back-end database performance in Oracle, MS SQLServer and DB2.

SPEED.PeopleSoft optimizes performance of the PeopleSoft™ suite of products.

SPEED.OracleApps optimizes performance of the Oracle Applications suite of products.

SPEED.Reports is a comprehensive performance feedback and reporting mechanism .

SPEED.Method encompasses the entire service offering. Every phase is completely managed by this proven methodology.

**An Integrated Solution to Application Performance**
